[PRINT FORMAT](#) [TRACK ARTICLES](#) [EMAIL ARTICLES](#)

Artilium, a provider of service delivery platforms for telecom companies, and Atos Origin, an international IT services company, have launched a hosted MVNO/MVNE (MVN_x) service delivery platform. This new solution combines Artilium's telecom network and IT knowledge with Atos Origin's expertise in the prepaid and e-payment market via Atos Worldline, an Atos Origin company.

The hosted service platform represents what the companies call a powerful and modular solution offering a complete range of real-time voice and data network services, coupled with prepaid/post-paid management and the CRM tools required for a multi-community, multi-brand and multi-reseller approach. This solution is future proof and modular meaning, say the companies, that it can be easily adapted to new functionalities.
